

Mike is a 19-year-old guy who just finished his A-Level courses in high school and he got his confirmation of enrollment at UTSC. Mike is an introverted person who is a little bit shy in making friends face-to-face. Mike learns psychology and math in high school and he wants to continue his study of psychology in college. He knows nobody in the college

right now and he does not know where to apply for the program or the information about the course. He is interested in being a TA in his senior year and he also wants to directly apply for a job after graduation.

Mike wants to know the college rules for choosing the course and the information about each course. Based on the knowledge he got, he can make a careful choice. Mike also wants to choose a major program in computer science, but he does not know where to find the course required and the description of the program. He also has some other interests in geology. He is tired of checking the course information for each course one at a time. He wants to directly find out about all the courses which involve geology. Besides these, Mike also wants to find some sort of evaluation for different courses so that he can take some great courses to boost his GPA. Mike is also too lazy to do his own planning of the courses. He wants to choose the courses automatically and easily.

Tom is a 23-year-old senior student at UTSC. He is an outgoing and sunny student who loves to talk to everybody on campus and meet new people either in person or on the network. He is currently enrolled as a CS specialist at UTSC and he has some valuable experience in course selection for the new students.

Tom wants to provide some feedback on the courses he took so that new students can see it by the time they make choices. Besides this, Tom also wants to take some new programs and new courses in which

he has some interest. He is also tired of reading the course description over and over again therefore he wants a faster way of filtering out the courses.

Because Tom is also planning to apply for graduate school in 2 years, he wants to take some great courses with a low workload so that his GPA will not drop. And he wants some planning for his graduation.
